To Whom It May Concern;

JCOR Mechanical has been awarded two contracts at the VA Eastern Colorado Healthcare System Medical Center in Denver. One contract, Replace Medical Vacuum and Gas Lines, was completed in November 2006. This project was an extremely challenging project in that the location of the replacement equipment was in the sub-basement of the Medical Center. The conditions in this area required work not only in high temperatures but required specialized knowledge in working a silica contaminated environment. Work required respirators and full protective gear. JCOR Mechanical performed all work in a timely and professional manner. Work was completed on time and within our budget.

We recently awarded a second contract with JCOR Mechanical upgrading our HVAC systems. This contract is currently in progress and within schedule, other than Government generated changes. This project is not without complications. I have found JCOR Mechanical an active participant in solving design problems in a cooperative spirit.

The VA ECHS Medical Center would welcome the opportunity to work with JCOR Mechanical on future projects.

Sincerely,

Raymond Tomori
Contracting Officer
