RE: JCOR Mechanical, Inc.

TO WHOM IT MAY CONCERN:

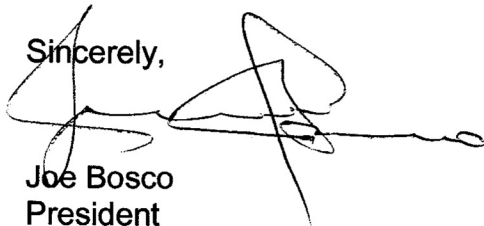

JCOR Mechanical has performed several projects for Bosco Constructors including two projects at the Denver International Airport.

One of these was the installation of two 2500 ton chillers at the Central Utility Plant, along with one 200 HP pump, one 250 HP pump, piping, insulation, valves, and instrumentation. JCOR's professionalism and expertise were exemplary on this very demanding job which required close coordination and attention to detail. DIA has strict safety, security, testing, installation, and project documentation requirements. JCOR fulfilled these requirements, and this project was completed two months ahead of schedule.

Another project JCOR performed for Bosco Constructors at DIA was the installation of an 85,000 MBTU/h temporary boiler. This project required a very quick turnaround and JCOR finished on time with outstanding results.

JCOR's knowledge, management ability, and collaboration with Bosco Constructors enabled us to complete these projects ahead of time and within budget. I would recommend JCOR Mechanical and its' staff for any work which requires a competent, capable, and reliable mechanical and/or plumbing contractor.

Sincerely,
